

Vacuum Interrupters Introduces the RVI-WL-35717F Replacement Vacuum Interrupter

Farmers Branch, TX, January 27, 2022 — [Vacuum Interrupters](#), a leading manufacturer of replacement vacuum interrupters, pole assemblies, parts, and components for medium-voltage vacuum circuit breakers and contactors, introduces the [RVI-WL-35717F](#) replacement vacuum interrupter.

This direct fit-and-function replacement unit meets original equipment ratings and is intended for use in select Eaton Cutler-Hammer AMPGARD vacuum starters with TRITON type SL AC vacuum contactors. The RVI-WL-35717F is built to provide excellent high-voltage insulation, high cumulative and high breaking capacity, exclusive internal torsion control, and fine alumina ceramic for an excellent vacuum seal.

The replacement vacuum interrupter offers 400 A rms rated current, 7.2 kV rms maximum voltage, 60 kV peak impulse withstand, and 8.5 KA rms rated short-circuit breaking current.

No modification is required for proper installation and operation in existing electrical equipment. Vacuum Interrupters can also provide assembly components and mounting hardware to aid in installation and shorten downtime.

About Vacuum Interrupters

Vacuum Interrupters, developer of the Magnetron Atmospheric Condition (MAC-TS4) predictive vacuum interrupter test set, Circuit Breaker Timer (CBT-1201 and CBT-1202), and Vacuum Interrupter Integrity Tester (VITS60M and VITS75M) systems, provides replacement vacuum interrupters, pole assemblies, and components for virtually all medium-voltage vacuum circuit breakers and vacuum contactors, and offers a High Voltage Test Lab and SF6 interrupter rebuild/replacement capabilities.
